

# AUGMENTED MEMOTHY SET

## DESCRIPTIVE BRIEF

The memothy set contains 2 items. 1 set per person. The items in the set are the Memothy Goggles and Memothy Necklace.

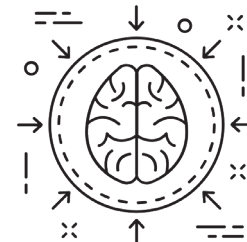

Memothy Goggles: device to wear when you want to watch the other person's life.

Memothy Necklace: 24/7 wearable device that records your life, your body information and your psycho.

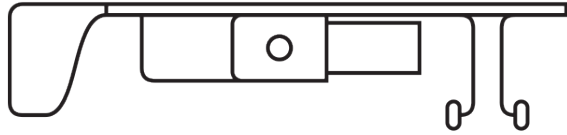

## Augmented memothy

The system allows accesibility to the most intimate information about the other person, being able to track **heart and brain rates** (body reactions, feelings, moods, stress level, steps, consumed and burnt calories, etc.) and raise the **context awareness** through gps.

# AUGMENTED MEMOTHY GOGGLES

## COMPONENTS

- VR 3D OLED SCREEN
- WIRELESS HEADPHONES
- TACTILE SCREEN

## DESCRIPTIVE BRIEF

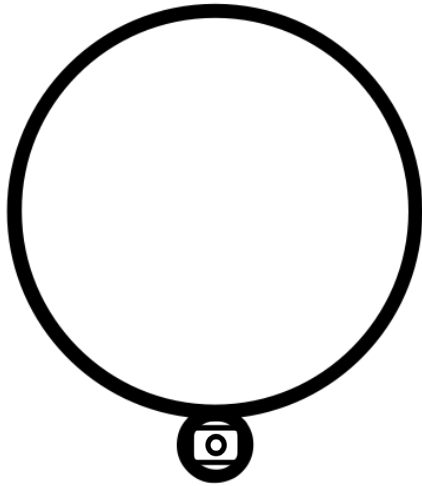

You wear them whenever you want to **watch the other person's life**. They are tactile so you can easily navigate through a menu where you can **choose to watch live or select any past moment** (i.g. Last Saturday night).

You can have **different layers of information**. While you are seeing the other person's life, you can access to his/her **heart rate and feelings** (pressure, stress, feeling happy or sad, scared or calmed)... It gives you an augmented sense of the other person's life. You can switch to "map view" where you can **track his/her location** and get a sense of their context, the most visited places, the patterns this person has within the city, etc.

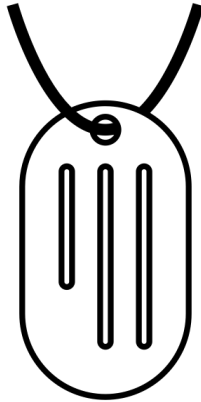

# AUGMENTED MEMOTHY NECKLACE

the necklace

example of a different version

close up of camera inside

## COMPONENTS

- CAMERA
- MICROPHONE
- HEART RATE SENSOR
- LED CAMERA LIGHT
- GPS

## DESCRIPTIVE BRIEF

The necklace is an everyday wearable that contains the live streaming camera that the user must wear. By designing it in the form of a necklace the user can wear it at all times with different types of clothing so that it can be continuously livestreaming. A heart rate sensor and a GPS are attached onto the back of the necklace to provide a in depth, intimate insight into each person. This information is then displayed via the cloud through to the other person's google glass.

The necklace would also feature a light that turns on whenever the other person logs on to watch you, such as the one on your laptop webcam. This is discreet enough not to be always noticed but will give the user a subtle signal that they are being watched. This will eventually lead to the person being more comfortable over time with being watched. We decided to include this because if there was no signal that someone was watching them the user could almost pretend that they are never being watched.

# VIDEO SNAPSHOT!

This is a sample shot of what the livestream that the user watches through their Google Glasses may look like! It displays the scrollable timeline, heartrate and location of 'Jackson Andrews'.
